

## Hawaan Forest Conservation Trust

### Monthly site inspection report:

Summary:

08.11.2024

1. Work at the Hawaan forest over October comprised routine maintenance actions, including cleaning and raking on the WESSA trail network, while a significant amount of woody encroachment was cutback at the corner of Block 5. Opening up the corner of Block 5 is a long-standing goal identified during the grassland conservation planning process - so its great to have finally arrived at this point.
2. October realised about 115 mm of rainfall, and there has been a clear increase in forest productivity this month – as noted by the increase in NDVI.
3. A single snare was removed during the routine snare western portion of the reserve.
4. Bird activity, especially breeding calls seemingly remain at their peak for the year. The Acoustic monitor has been deployed to record a summer-sample subset as part of the reserve baseline monitoring efforts.
5. Actions planned for November are to focus on spot spraying regenerating woody plants in Grassland Block 2 and 5, while also to install a few small browsing enclosures with the re-purposed fencing material which is outstanding work from October and has not been done as yet.

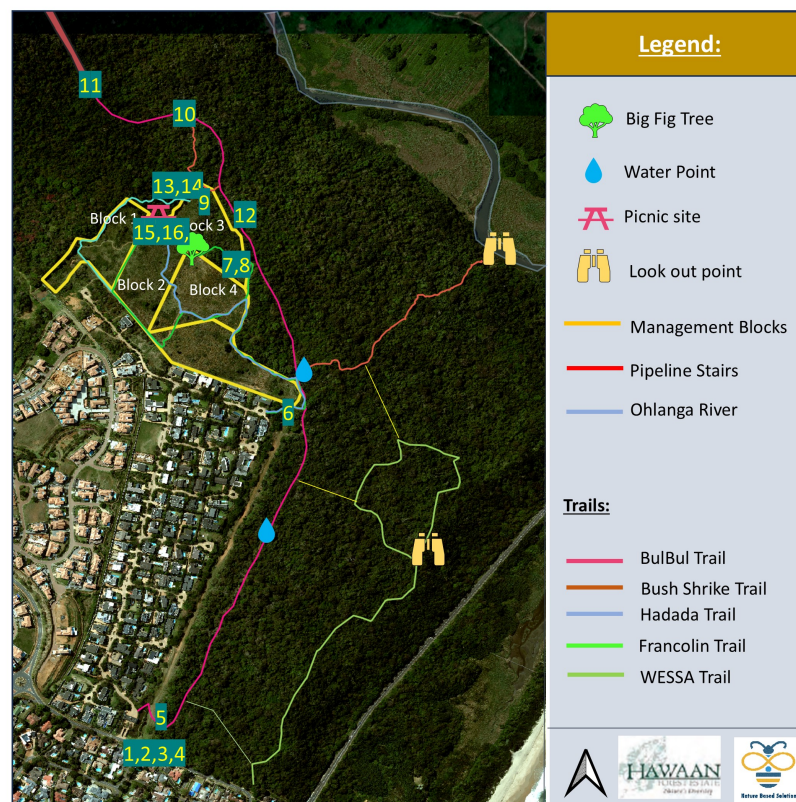

Figure 1. Numbers on the map refer to items below.

(1)

The Hawa'an Entrance sign and new fence has been installed neatly at the servitude gate.

(2)

Signage has been taken down from the grassland and will now be stored neatly behind the shed until they are removed.

(3)

A few Indian Laurel (*Litsea glutinosa*) were noted in forest near the management zone they will be removed in November.

(4)

Forest pathways and trails have been mowed and were neat during the inspection.

(5)

Some of the paths on the WESSA trail were raked in October – HCT Staff will work on these again in mid-November.

(6)

The grasses within Grassland block 5 have come back well after the burn in August.

---

(7)

HCT staff to deploy herbicide selectively in order spot-spray re-emerging woody vegetation within the grassland.

(8)

Bush clumps on the forest edge at Grassland Block 4 were identified for the work programme in 2025.

(9)

HCT staff have been attending to cutting back the woody bush-clumps at the

(10)

Trails within the forest, towards the pipeline in the west area have been mowed and opened up during October.

(11)

The pipeline was checked for leaks after recent rain in early October – some overhanging branches need pruning which will be attended to during November.

(12)

Flowering within the forest-understory during October is the most beautiful forest herb *Freesia laxa*

---

---

(13)

If you look carefully in this image – you might see a Bark Mantis – which love to hide and hunt on the bark of *Psydax obovata*  
<https://www.inaturalist.org/observations/249014495>

(14)

Another flowering shrub in the forest during October are *Grewia occidentalis*

(15)

Flowering nicely in the grassland during October was *Eriosema psoraleoides* – which has been once of the more successful wildflower re-introductions into the grassland.

(16)

During October, HCT staff observed a ground-nesting colony of wasps from the family Philanthidae. They were seemingly hunting small rhinoceros beetles to take to their nests to feed their larvae once they hatch.

---

**Climatic Data**  
**Rainfall and The Normalized Difference Vegetation Index (NDVI) which is a measure of the productivity of forest vegetation.**

The camera trap images from October 2024 reflect the humidity and the greening up of the forest, which has been occurring since the beginning of September. This change lends a mystical quality to the forest at this time of year.

	3.7	Keep Tilley Huts neat and tidy sweep daily, clean windows every 10 days check maintenance and rusting on a monthly basis and report to HCT members.	Weekly	x	x	x	x	x	x	x	x	x	x	-	-	-

Normalised differentiated vegetation index, on a scale from 0-1, is a satellite derived metric used to monitor vegetation health and primary productivity. This can be tracked on a monthly bases through the growing season, where it can be noted that mean NDVI at the Hawaan peaked in Mid-February at 0.58 and dropped to 0.45 during late May,

**Female Bushbuck**

**Male Bushbuck**

**Blue Duiker - Male**

**Lemon Dove**

**Red Duiker - Male**

**Banded Mongoose**

**Vervet Monkey**

## Camera Trap imagery from April 2024

Vervet monkeys have been enjoying the fresh water provided HCT at the Bushshrike water point

As have many of the Red Duiker

The large male bush-buck

and the beautiful female bush-buck, all look in fine condition.

Two beautiful forest doves, the rarer forest, Lemon Dove..

and the more common, more of associated with woodlands, Tambourine Dove, were captured on the camera during April

Observations from the camera traps in February showed the usual allotment of animals using the water provided by the HCT staff to bath and drink. We are working towards formalising the logging of this data on a consist basis so that it can be used a baseline information for the forest and to track change.

Spotted Genet

Tambourine Dove

Red Duiker

Blue Duiker

Spotted Eagle Owl

Water Mongoose

**Camera Trap highlights from November 2023. Hawaan Forest.**

**Large Spotted Genet**

**Female Bushbuck**

**Red Capped Robin Chat**

**Pair of Red Duikers**

**Purple crested turaco**

**Tambourine dove**

The forest fauna have been out in full force during August and the action has clearly revolved around the water point at the entrance to the Bush Shrike trail. One again some beautiful forest images have been captured.

## Camera Trap imagery from March 2024

There have been some great mixed foraging parties captured on the camera's during March. Here, Crested Guinea fowls and Red Duiker.

On the Bush-Shrike trail, Crested Guinea fowl and Bush Buck.

The recent hot weather has prompted a diverse array of animals captured at the water-hole on the Bush-shrike trail. Such as the Crowded eagle drinking at the water-hole.

A family of Purple Crested Turaco's.

A nice large Bushbuck passing by the water-hole on the Bush Shrike trail.

A small, blue Duiker close up at the water-hole.

The forest fauna have been out in full force during August and the action has clearly revolved around the water point at the entrance to the Bush Shrike trail. One again some beautiful forest images have been captured.

# The Polyphagous Shot Hole Borer (*Euwallacea fornicatus*\*) and Fusarium dieback (*Fusarium euwallaceae*)

The Polyphagous Shot Hole Borer (PSHB) is an ambrosia beetle native to Southeast Asia. In 2017 this pest was detected on London Plane trees in the KwaZulu-Natal National Botanical Gardens, Pietermaritzburg. Its presence has since been confirmed in multiple locations in eight provinces in South Africa. The beetle has a symbiotic relationship with the fungus *Fusarium euwallaceae*, which serves as a food source for the adults and their larvae. In susceptible trees the fungus causes a disease called Fusarium dieback, which can lead to dying branches and tree death. The beetles attack a wide range of exotic and indigenous trees in urban, agricultural and natural landscapes.

Above: An adult female is 1.8-2.6mm long. Males are smaller and cannot fly.

PSHB is not able to complete its life cycle on all the tree species it attacks. Trees in which the beetle is able to breed and multiply are referred to as '**reproductive host trees**'. Important reproductive hosts include species of oaks, maples, willows and coral trees, avocado and castor bean. '**Non-reproductive host trees**' are attacked by the beetle, but the beetles do not establish galleries (tunnels) or breed. The fungus may, or may not cause disease. Trees are generally not expected to die. An updated list of confirmed hosts in South Africa can be viewed at [www.fabinet.up.ac.za/pshb/](http://www.fabinet.up.ac.za/pshb/)

The movement of infested wood is an important means of spread of the beetle. Therefore, appropriate disposal of infested trees (by chipping/composting, solarization or burning) will be key to reducing the spread of this damaging pest. Surveys to monitor the spread of the beetle in South Africa are continuing. The public can assist by looking out for symptoms. Suspected instances can be reported to [pshb@fabi.up.ac.za](mailto:pshb@fabi.up.ac.za)
